Minitab Connect®

Flow Tool: Data Access & Processing

Self-service data integration, automation and delivery

Flow Tool Enables:

- Direct inputs from your online and offline, internal and external sources.
- Automated cleansing and transformation processes that run on a schedule, on-demand, or event-triggered.
- Easily output to your destination platforms and connect directly from other business intelligence tools.
- Managed web forms create governance and efficiency by eliminating secondary form tools and the need for spreadsheet sharing or uploads.
- Point and click simplicity for the analyst and business user.
- Custom code capability via PHP, Python, and PERL for the developers and engineers.

Minitab Connect allows data users at various technical skill levels to access and cleanse data from data warehouses, cloud applications, spreadsheets, and other sources without risking data quality, integrity, or security.

The Flow tool enables flexible, intuitive data integration, transformation, and delivery for seamless processing of online/offline and internal/external sources. Minitab Connect eliminates manual tasks and automates the movement of data between different sources and platforms.

The sophisticated point and click interface makes it easy to manage the data flows and see each step of the workflows including sources, triggers, changes, and deliverables. Minitab Connect pairs clean, intuitive design with powerful functionality so users have the tools to visualize, analyze, and manage repeatable data processes without switching between screens.

Pre-built connectors and flexible data ingestion options make it easy to quickly access virtually any data source and add new integrations.
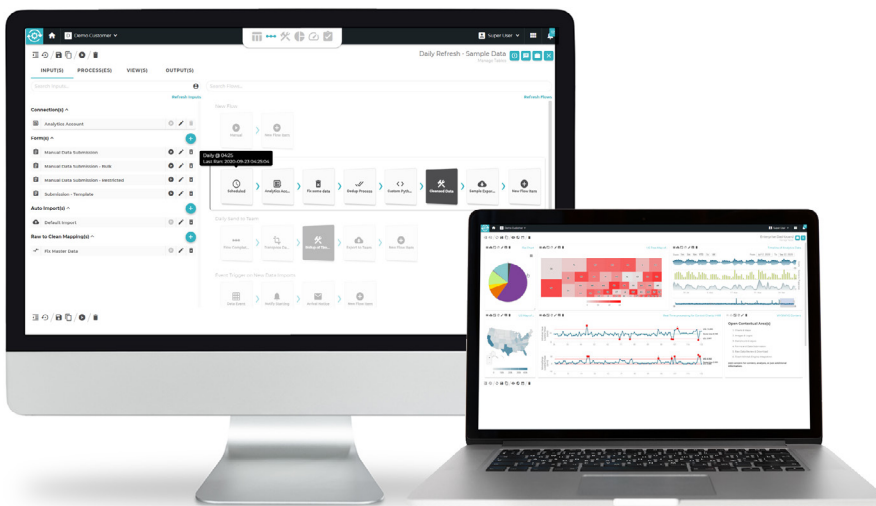

Minitab Connect makes it easy to access and automate data flow across multiple data sources that already exist in your organization.

With Minitab Connect you can:

Access: Flexible, intuitive data integration tools let users blend data from a variety of internal and external sources, like data warehouses, data lakes, IoT devices, SaaS applications, cloud storage, spreadsheets, and email.

Prepare: Self-service data preparation tools empower users to quickly and interactively, profile, curate, enrich, and shape diverse datasets using a spreadsheet-like interface. Data preparation steps can be shared with other users as repeatable workflows, eliminating repetitive data setup processes, and maximizing productivity.

Analyze: Dynamic, real-time visualizations with interactive elements allow users to explore data and develop deeper insights.

Automate: Automate data transformation flows that support data governance and quality rules to ensure projects are fed with accurate, trustworthy data.

Govern: Industry-leading data governance tools provide the security to enable data access across lines-of-business while ensuring proper use of data assets.
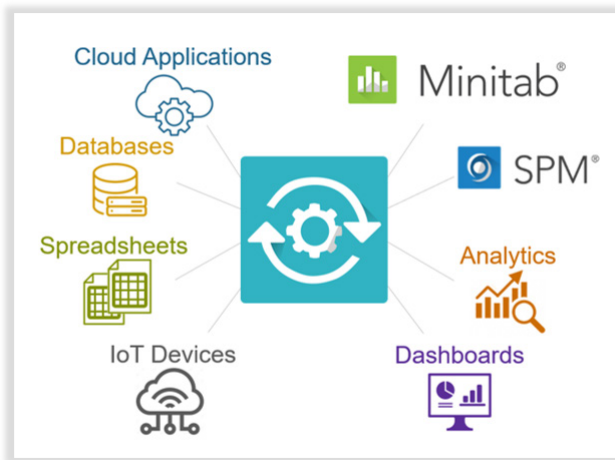

Access all your relevant data

High-performance, pre-built connectors make it easy to integrate centralized data from multiple data enterprise systems and big data sources. Clean, aggregated data can be loaded directly into popular analytics and visualization platforms.
